Education

- **Software Engineering Career Course**
Boca Code
04/2020 - 06/2020
- **Associate in Arts Degree (Marketing)**
Palm Beach State College
09/2014 – Present
- **EMT Certification**
Palm Beach State College
03/2015 – 09/2015
- **Bachelor of Science, Information Technology**
Institute Polytechnic Informatics Raul Cepero Bonilla
09/2005 – 07/2008

Skills

JavaScript (ES6+) • TypeScript • React •
React Native • Next.js • SCSS Modules •
Tailwind CSS • Responsive & Accessible UI
SVG & Canvas • Three.js • Node.js •
Express • REST APIs • MongoDB •
PostgreSQL • Firebase • Shopify • Jest
AWS (S3, Lambda, Amplify) •
Serverless Functions & Architecture •
Performance Optimization

Summary

Full-stack software engineer with a focus on accessible UI, component libraries, and design systems in React, Next.js, and TypeScript. Author of published npm packages including css-forge, point-focus, and csv-conductor. Experience building cross-platform mobile apps with React Native and currently exploring AI agent orchestration. Bilingual in English and Spanish, certified EMT, and driven by a love for automation, art, cooking, and agriculture.

Work Experience

Founding Engineer / Technical Lead, AMR Vineyards

2025 – Present

- Architected and built the company's end-to-end digital commerce infrastructure, including e-commerce storefront, point-of-sale, and inventory management systems for both online and in-person wine sales. Built internal tools for product catalog, inventory workflows, and vineyard operations, connecting Shopify, payment processors, and operational dashboards for end-to-end traceability. Implemented barcode and QR-based product tracking to streamline fulfillment, event logistics, and inventory audits. Defined the technology roadmap and system architecture, designing for scalability across future distribution channels and retail expansion.

Software Engineer, CITY Furniture

01/2022 – 03/2026

- Owned product pages and Blueprint, the internal UI component library powering a high-traffic e-commerce platform serving nearly 700K monthly visitors and \$94M in annual online revenue. Modernized Blueprint by replacing JS-based styling with CSS-native solutions, reducing bundle size and improving both runtime performance and WCAG accessibility compliance across the entire site. Participated in the migration from React Context to Redux across product pages, cart, and checkout flows, improving state predictability on critical revenue paths. Implemented 3D model rendering on product detail pages for interactive product visualization. Built and published point-focus (npm), a physics-based image zoom library, when no existing solution met the platform's requirements. Served as the primary liaison between design and engineering teams, championing accessibility standards across the development workflow.

Software Engineer, Rockval, Inc

07/2021 – 09/2021

- Single-handedly developed cross-platform mobile app using React Native and Expo. Integrated Google Maps API with property pinning functionality. Implemented Redux for state management and styled-components for UI.

Non-relevant roles • 01/2017 – 06/2021

Red Zone Specialist, Apple

07/2015 – 12/2016

- Provided support, training and troubleshooting for customers' existing products and applications, as well as recommending new products that fit their technical requirements.

Non-relevant roles • 11/2013 – 06/2015

Computer User Support Specialist, Facultad de Ciencias Médicas Julio Trigo López

10/2008 – 10/2013

- Supervised the performance, configuration, upgrade and repair of equipment and systems for employee and student use. Trained employees and students on how to use their devices and Microsoft Office applications.
